EDUCATION

Bachelor of Technology (CSE with Specialization in Cybersecurity)

Dayananda Sagar Academy of Technology and Management, Bangalore (CGPA-8.6)

Central Board of Secondary Education (12th Standard)

DAV Public School, Hehal, Ranchi | Subjects: Physics, Chemistry, Mathematics(77.83)

Indian Certificate of Secondary Education (10th Standard)

St. Thomas School, Ranchi, Jharkhand(88.6)

PROJECTS

WealthFlow AI: Agentic Investment Strategist

- Engineered a 4-stage agentic pipeline (Profiler, Researcher, Critic, Director) using React 19 and Python to automate financial risk assessment and asset discovery.
- Implemented automated stress-testing and alpha asset discovery to transform raw market data into executable investment roadmaps.

AETHOS: Agentic Image Architect

- Developed a multi-model orchestration system utilizing YOLOv8, BLIP, and Tesseract OCR for advanced visual content auditing and brand adaptation.
- Integrated a deterministic “Critic Loop” to ensure quality and relevance in AI-generated creative workflows via a terminal-inspired interface.

AgriSnap: Full-Stack Agriculture Platform

- Designed a comprehensive ecosystem with a React Native (Expo) mobile frontend and a Django REST backend for real-time crop disease reporting and advisory.
- Built and integrated a Rasa-powered conversational AI service to provide automated technical guidance and market visibility for rural farmers.

TECHNICAL SKILLS

Languages: C, Python (freeCodeCamp Certified), Java, TypeScript, HTML/CSS

Databases: Advanced SQL (Stored Functions & Programming Constructs)

Frameworks/Tools: React, Vite, Node.js, Git

CERTIFICATIONS

- Python Developer Certification** – freeCodeCamp
- Advanced SQL: Programming Constructs & Stored Functions** – upGrad
- Google Cloud Skill Badge: Prompt Design in Vertex AI** – Google Cloud

ACHIEVEMENTS & RESEARCH

National Finalist | L&T Technology Services TECHgium (9th Edition)

- Selected as a top-tier finalist team out of 62,600+ students and 540 colleges nationwide for developing a real-time AI accessibility solution.
- Presented a functional Proof of Concept (PoC) to an industry jury demonstrating technical innovation and market scalability.

Lead Researcher | GenCyberSim: AI-Driven Simulation Framework

- Engineered a 3-tier architecture (React.js, FastAPI, LLMs) to synthesize dynamic cyber-attack narratives, eliminating rote memorization in defense training.
- Developed a graph-based simulation engine using NetworkX to model network traffic and automated risk scoring for real-time threat evaluation.
